| Section or Lesson   | <i>Section Title: Working Model</i><br>Lesson Title: Requirements  |
| <input checked="" type="checkbox"/> Section<br><input type="checkbox"/> Lesson<br><input type="checkbox"/> Quiz | During the Concept and Assessment phases, the Business Owner, Solution Captain, and the newly formed Core Team worked to establish the vision of the product and began documenting materials that outline what they intend to deliver to the market.<br><br>In the Requirements phase, the team expands to include business stakeholders and delivery teams, and those materials are used to educate the full Working Team about the product they are collectively tasked with delivering. You can visit the T-nation Working Model site for up-to-date information on the tools used in this process. |

| Interactive   |  <p>The diagram, titled "PHASES IN THE WORKING MODEL", is set against a magenta background. It features six icons arranged in two rows. The top row includes a lightbulb icon labeled "CONCEPT" and a magnifying glass icon labeled "ASSESSMENT". The bottom row includes a checklist icon labeled "REQUIREMENTS", a puzzle piece icon labeled "BUILD", and a paper airplane icon labeled "LAUNCH".</p>   |

| Section or Lesson   | Title: Things to Consider  |
| <input type="checkbox"/> Section<br><input checked="" type="checkbox"/> Lesson<br><input type="checkbox"/> Quiz | <p>Each concept is unique and requires the approach to be catered accordingly to help you be successful. As you review the steps outlined in this document, consider these tips along the way:</p> <ul style="list-style-type: none"><li>• The Working Model subscribes to the idea of just-in-time design, which is an iterative cycle.</li><li>• Gaining business alignment of the Acceptance Criteria is critical. Acceptance Criteria exactly what needs to be accomplished for a capability to be considered complete. It is traced from the initial design documentation, all the way through development and testing activities.</li><li>• The tools are leveraged more heavily in requirements and design activities than they have been in previous steps in the Working Model process. Familiarize yourself with the tools early and keep the information up-to-date and accurate.</li><li>• Capability decomposition provided by one of the tools is a recommendation. The team is empowered to use their best judgement to determine the most effective way to break down the work into manageable pieces of core functionality.</li><li>• Use your sense of agency, think critically, and let common sense prevail.</li></ul> |

|---|---|-------|
| Section or Lesson   | Title: After the CIR  |       |
| <input type="checkbox"/> Section<br><input checked="" type="checkbox"/> Lesson<br><input type="checkbox"/> Quiz | <p>After CIR, the cross-functional stakeholders are identified. Stakeholders to submit their requirements for <i>all</i> capabilities across all product bundles.</p> <p>The Capability Description section should summarize what the capability is accomplishing. The Acceptance Criteria section should show how the capability is satisfied. Traceability will ultimately be mapped back to the capability and its acceptance criteria. Therefore, it is important to get sign-off from stakeholders that the Capability Description and Acceptance Criteria sections are accurate representations of the requirements they submitted.</p> |       |

# Working Model Requirements – Requirement and Design Overview

|   |   |
|---|---|
| Section or Lesson   | Title: Refine the Capabilities  |
| <input type="checkbox"/> Section<br><input checked="" type="checkbox"/> Lesson<br><input type="checkbox"/> Quiz | <p>You will continue to validate the capability description and newly added acceptance criteria are accurate, relevant, and uphold the original intent of the requirement(s) that person submitted. Newly derived capabilities or acceptance criteria are expected to emerge from this process, which continues until all are defined. This may involve rewriting capability and acceptance criteria to be more expressive, splitting big items into smaller ones, re-prioritizing them, or deleting those that are obsolete.</p> <p>During capability refinement sessions, focus on:</p> <ul style="list-style-type: none"><li>✓ Business priority</li><li>✓ Delivery team impacts</li><li>✓ Foundational items</li><li>✓ The number of capabilities in progress (to avoid overloading your resources)</li></ul> |
| Lesson Blocks   | Visuals   |
| Choose an item.   |   |

|   |  |
|---|--|
| Section or Lesson   | Title: Note  |
| <input type="checkbox"/> Section<br><input checked="" type="checkbox"/> Lesson<br><input type="checkbox"/> Quiz | <p>It is important to note that, unlike previous working models, SOX compliance and traceability are mapped to the capability and associated acceptance criteria, not the business requirement. That is why it is critical to gain acceptance from your business stakeholders that they agree with the documentation. There may be times when a few sessions are needed to refine the capabilities and acceptance criteria to achieve alignment with <i>all</i> the impacted stakeholders before moving forward.</p> |

# Working Model Requirements – Requirement and Design Overview

|   |   |
|---|---|
| Section or Lesson   | Title: Rinse and Repeat   |
| <input type="checkbox"/> Section<br><input checked="" type="checkbox"/> Lesson<br><input type="checkbox"/> Quiz | <p>The Working Model is an iterative process. Once you've brought the first Product Bundle through design and handed the Capabilities, Features, User Stories, and associated artifacts, the teams begin the refinement process for the next Product Bundle that has been prioritized.</p> <p>Congratulations! You have officially navigated your way through the requirements and design activities of the <b>Working Model</b>.</p> |
